

Decorator Example

Beverage acts as our abstract component class.

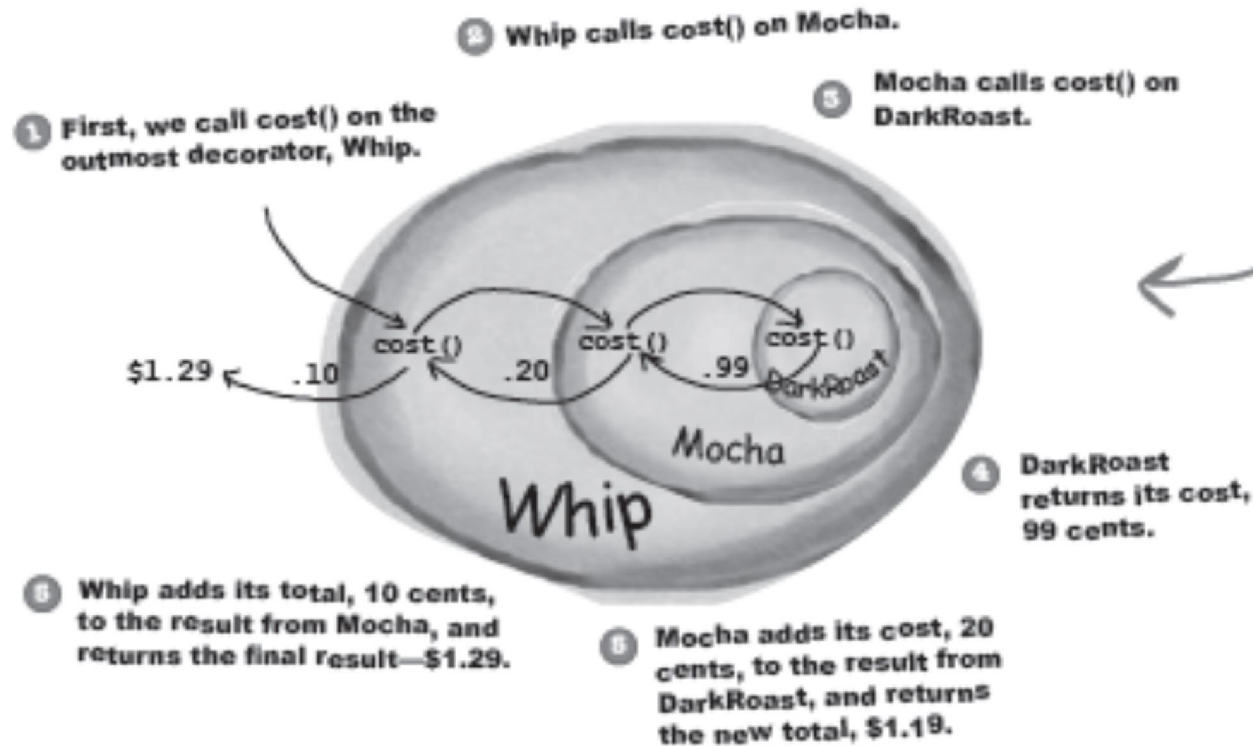

Starbuzz Coffee

<u>Coffees</u>	
House Blend	.89
Dark Roast	.99
Decaf	1.05
Espresso	1.99
<u>Condiments</u>	
Steamed Milk	.10
Mocha	.20
Soy	.15
Whip	.10

And here are our condiment decorators; notice they need to implement not only `cost()` but also `getDescription()`. We'll see why in a moment...

Decorator Example

This picture was for a "dark roast mocha whip" beverage.
